

MEDIA RELEASE – 02 April 2007

AUSTRALIAN COMPANY DEVELOPS UNIQUE ESSENTIAL SERVICES/FIRE SAFETY MEASURES REPORTING SYSTEM

Verified has developed a unique recording and reporting system to ensure compliance of essential services/fire safety measures, utilising the latest in scanning technology.

Who has the time, resources and knowledge to ensure that their responsibilities under State regulations are being met? With hundreds of records to manage per building, over 40 designated items and multiple contractors involved, Verified delivers a consistent, simple and cost-effective method to ensure your obligations are met.

“Verified saves you time and money, it’s as simple as that. Managing the essential services documentation used to be a very difficult and time-consuming task. With Verified, we only worry about our essential services when we receive an email from Verified to say that there is a fault or a contractor has missed a test. That saves us a lot of time and effort.” Says Jay Panditharatne, Director Engineering Services at CB Richard Ellis.

The Verified logbook sheets are purpose designed to allow them to be electronically scanned using the latest in Intelligent Character Recognition and Optical Mark Recognition technology. Once scanned, the data is interrogated to ensure that it meets specific requirements.

The Verified database then **automatically** provides you with electronic (via email):

- notification of system faults;
- notification of test fails;
- notification of missed tests;
- recording and storage of testing data and documents;
- annual reporting required to meet statutory requirements.

All these records, including an image of all the actual scanned sheets are also readily available and searchable on the Verified Website (via a secure login).

Verified provides the electronic reports and information required for your compliance obligations, with:

- no changes to the contractor maintenance regimes
- no manual data input;
- no new software;
- no training;
- no input from you!

This ensures you save money, time and resources by minimising staff involvement in compliance, improving the efficiency of your Facility Management team.
